the lever 802 in a raised position. The lever 802 is provided with a crimping hammer 808 and a crimping anvil 810 is located below the hammer 808. It will be appreciated that by placing the second flange of one of the angle brackets of the invention onto the anvil 810, and pressing down on the lever 802, the hammer 808 will form the crimps described above.--

- Sub  
7/57
- 24
1. An apparatus for suspending a fixture in conjunction with a wire, said apparatus comprising:
- an angle bracket having a first flange and a second flange;
  - said first flange lying in a first plane and said second flange lying in a second plane which is not parallel to said first plane,
  - said first flange defining a hole adapted to receive a fastener,
  - said second flange having structure adapted to receive an end of the wire,
  - said structure being crimpable upon the end of the wire to secure the wire to said second flange with the wire extending in a direction which forms an angle with said first plane.
